PROFESSIONAL PROFILE

Systems Engineering student (9th semester) with experience leading a software development team of 12 to 15 people, building custom e-commerce solutions and organizational management systems. Proficient in the Java / Spring Boot / Angular stack with PostgreSQL, version control, and cloud deployment. Seeking a Backend Software Developer position to contribute technical expertise and team leadership experience.

PROFESSIONAL EXPERIENCE

Grupo Consigue Ventas Inversiones E.I.R.L. — Lima, Peru *Feb. 2025 – Jun. 2026*
Software Development Lead · Technology Department

- Led two teams (Backend and Frontend) of 12 to 15 developers, delivering 5 custom software projects end-to-end —e-commerce platforms and organizational management systems— with delivery times of 2 to 4 months depending on complexity.
- Designed microservices and hexagonal architectures with Java and Spring Boot; documented APIs with OpenAPI/Swagger, secured them with Spring Security (JWT/OAuth2), and used Apache Kafka for asynchronous communication between services, with Angular on the frontend and PostgreSQL as the database.
- Translated business requirements gathered by the analyst team into functional and non-functional requirements, and represented the development team in client meetings (via Google Meet) to validate adjustments.
- Prepared weekly progress reports for Management and established version control workflows with Git and GitHub, coordinating deployments on DigitalOcean with Docker.

FEATURED PROJECTS

Custom Corporate Web Platform — Confidential Project *Professional Project · 2026*
Grupo Consigue Ventas Inversiones E.I.R.L.

- One of the last projects I led at the company: a corporate platform built as a custom functional replica for a client, pending final branding and name confirmation from the client.
- Left the project at an advanced development stage, training the new lead to ensure continuity before concluding my time at the company.

GymManager — Gym Management System *Personal Project*

- Independently developed a web application for managing gym members, memberships, and payments, using React and TypeScript.
- Implemented Supabase as the remote database and deployed the application on Vercel.

https://gym-management-sand.vercel.app/

Personal E-commerce Project *Personal Project · In progress*

- Independently developing an e-commerce platform with Java and Spring Boot, applying the same architecture and security principles used in my professional experience.

EDUCATION

Universidad Nacional José Faustino Sánchez Carrión — Huacho, Peru
Bachelor's Degree in Systems Engineering — 9th semester (in progress)

CERTIFICATIONS

Microsoft SQL Server Specialization — Datux Perú S.A.C. *May – Jun. 2026*
Basic, Intermediate, and Advanced Levels · 68 hours · Grade: 19/20

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, Spring Security, Angular, TypeScript, JavaScript, HTML, CSS

APIs, Security & Messaging: OpenAPI/Swagger, JWT/OAuth2, Apache Kafka

Databases: PostgreSQL, Microsoft SQL Server

Integrations: Mercado Pago SDK, Driver API

Tools & Deployment: Git, GitHub, Docker, DigitalOcean

LANGUAGES

English: Intermediate Level — UNJFSC Language Institute (Basic: 2023–2024 · Intermediate: 2024–2025)
